Smart result viewer

The final internship project
Frontend intetn T1 FIP26
Author:Abubakar Ibrahim Umar

PROBLEM STATEMENT

Many universities still manage results manually or with outdated systems.
This leads to errors in GPA calculation, poor accessibility, and inefficient record management.

SOLUTION

I built a Smart Result Viewer that allows lecturers to manage student results and students to securely view and export their academic performance.

FEATURE'S

LECTURER:

1. Add student to the records
2. Add multiple courses
3. Edit and delete students records

STUDENTS:

1. Log in with matric and full name
2. View results
3. Filter by semester
4. Export PDF

SYSTEM FLOW

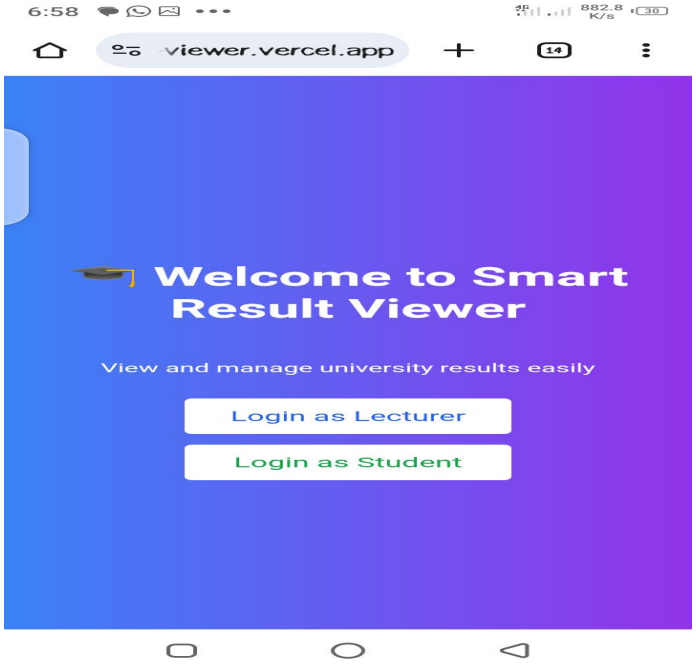
1. Lecturer log in /sign up
2. Add students records to the system
3. Student log in and sees only his results
4. GPA calcukated automatically
5. Chart for performance and score distribution

TECHNOLOGY STACK

1. REACT for frontend
2. Tailwind CSS for UI
3. Axios API Calls
4. JSON server (mock backend)
5. JSPDF and HTMK2canvas for PDFBexport
6.

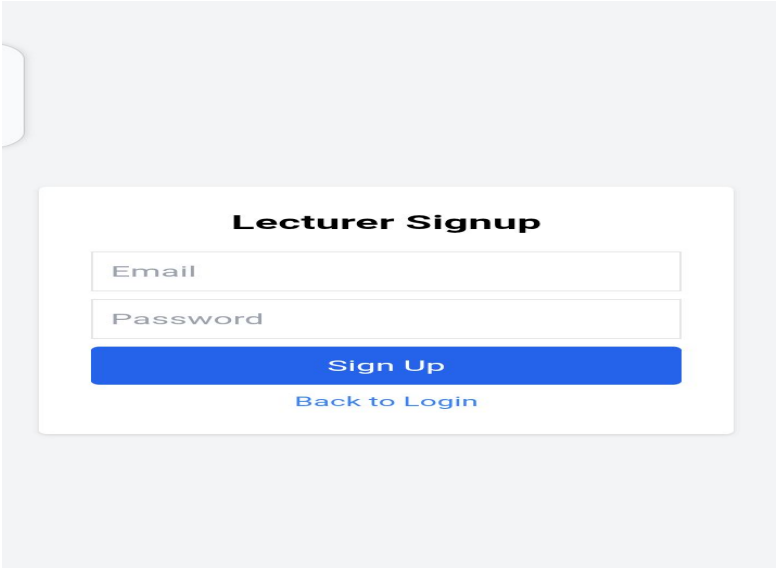
UI DEMONSTRATION

WELCOME PAGE



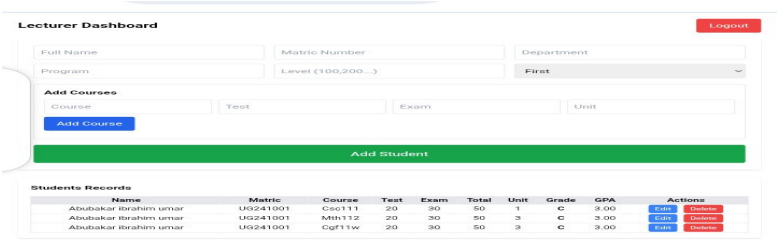
Here is the welcome page where lecturer and students log in to their dashboard.

LOG IN AND SIGN UP PAGE



This is where lecturer create his account using email and password to start making his record.after successful registered then the lecturer log inbto his dashboard.

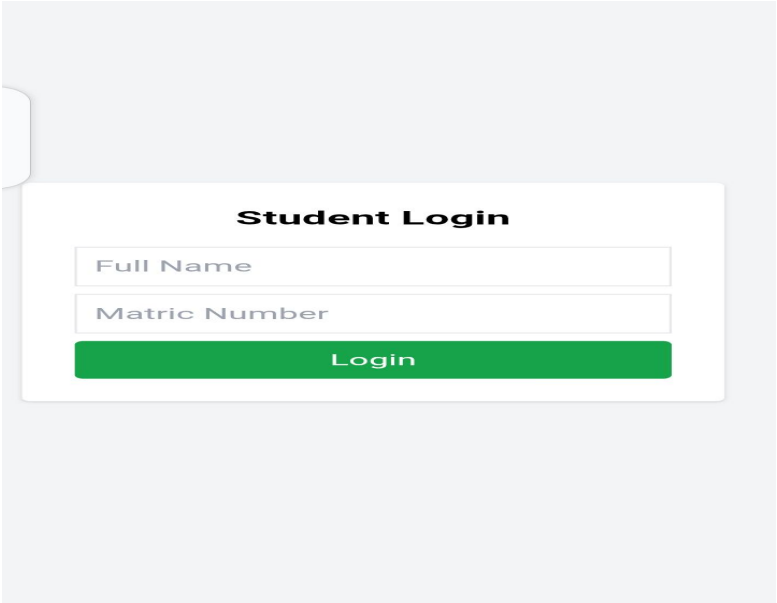
LECTURER DASHBOARD



After lecturer signed in,then the next page is the dashboard to start making his records

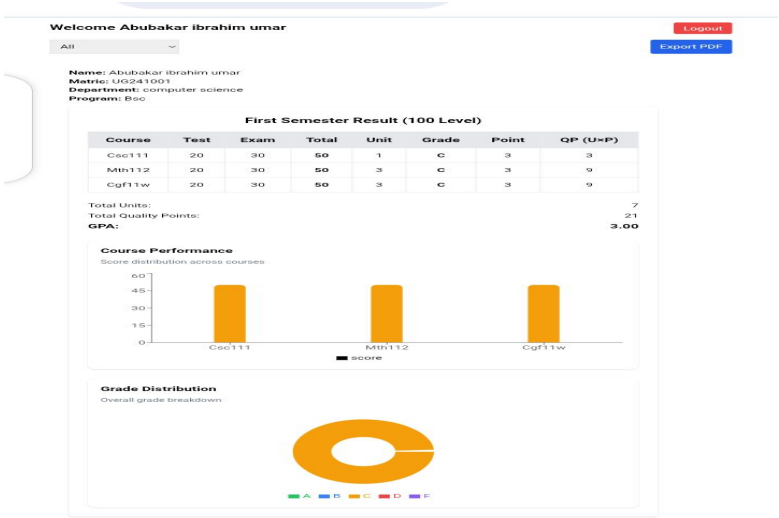
The lecturer is allowed to edit and delete student from his record,he is also allowed to view each and every student performance in his dashboard.

STUDENT LOG IN PAGE



Here is where a student lovg in using his fullname and matriculation number,usingvthe exactly information that the lecturer added in his record sheet.

STUDENT RESULT AND PERFORMANCE



This is a final result view page in which a successful logged in student view his result and see his academic performance,he can also filter first and second semester result and he is allowed to download it as POF.

FUTURE IMPROVEMENTS

- Add CGPA across semesters
- Implement real backend (Node.js & MongoDB)
- Add authentication (JWT)
- Improve UI design
- Deploy with cloud database

CONCLUSION

Smart Result Viewer successfully demonstrates:

- A real-world academic system
- Accurate GPA computation
- Secure student access
- Modern web development practices

THANK YOU FOR LISTENING
